Your radio. Across your screens.

Live BBC radio, programme guides, catch-up listening and offline shows in one familiar interface.

A waveform identity

Turquoise and warm-white bars on charcoal, with subtle S and L shapes. A square icon for iPhone and iPad, with a wider tile for Apple TV.

This guide shows running-app simulator captures of the current build. Duo screens are labelled layout previews; they are not photographs or verified device captures.

Listen live

Browse the BBC station catalogue, see current programme artwork and track information when supplied, and switch station with a tap.

Find a programme

Explore schedules by date. Use a compact list on iPhone or a time-based guide on larger screens, with search that filters as you type.

Keep your favourites

Mark favourite stations and keep them together. iCloud synchronises favourites between devices using the same account.

Take shows offline

Press and hold an available past show on iPhone or iPad to download it. Manage playback, progress and deletion in Downloads.

Pick up where you left off

Saved catch-up positions sync through iCloud. Reopening a show resumes from the saved position; live stations return to live radio.

Enjoy the big screen

Apple TV has remote-friendly playback and scrubbing, a full-screen guide, and a new Top Shelf extension for favourites and recent listening.

Radio in your pocket

A compact listening screen and a date-led schedule list, designed for quick one-handed use.

Tap a station to play

The artwork carousel starts the selected live station immediately, including when playback was paused.

Artwork and track information

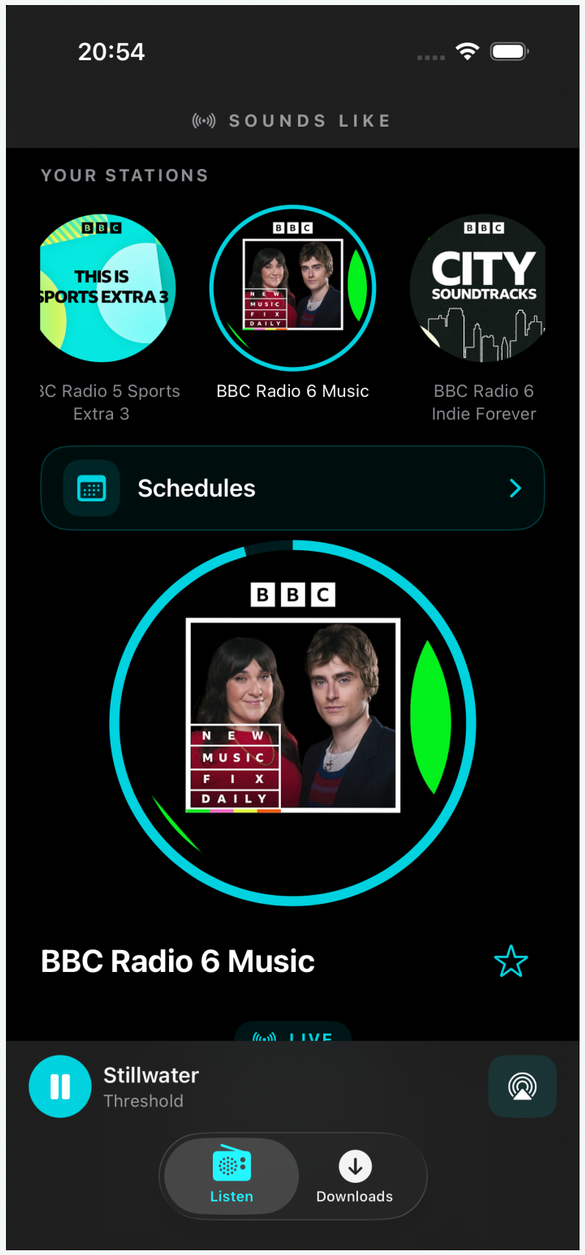

Programme artwork, station name and show details lead the screen. Current track and artist appear when available from the BBC.

Playback that stays close

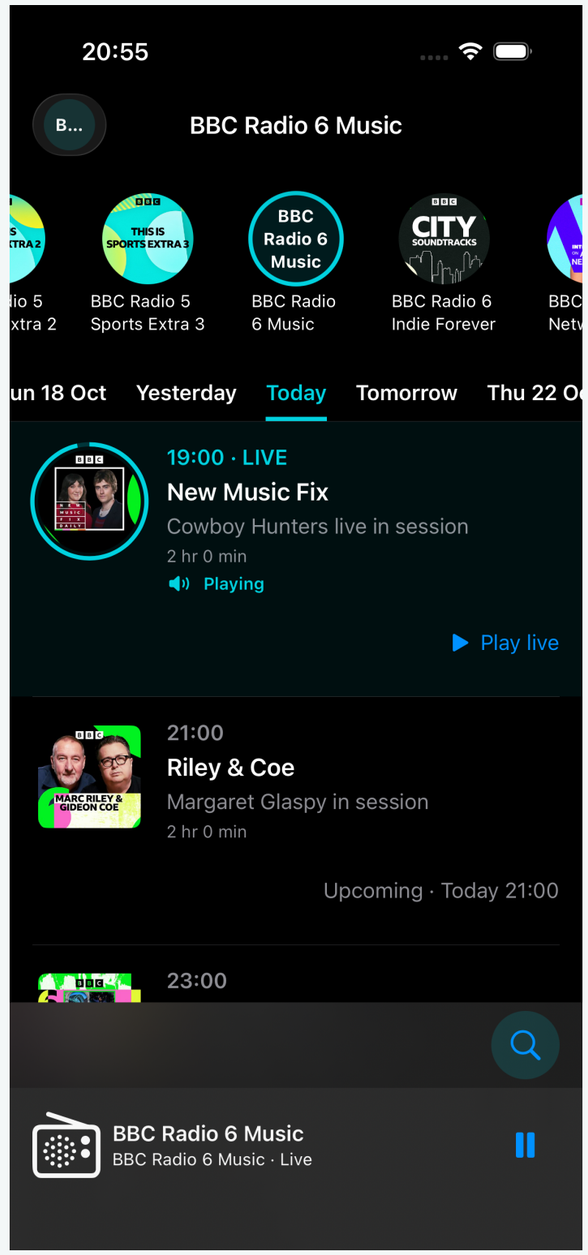

Compact controls keep play/pause and AirPlay within reach. Expanded controls support seeking within the available live buffer.

Browse, search and return

Search sits at the bottom right of Schedules. It filters the selected station and day. Tap the top-left artwork to return to Now Playing.

NOW PLAYING

SCHEDULES

More room for the guide

A full-width station carousel, spacious player and a station-by-time schedule grid.

Listen / Downloads

The selector sits directly below the Sounds Like name. Playback controls extend across the bottom of the player.

A proper programme guide

Stations run down the left; programmes move across the timeline. Scroll vertically through stations and horizontally through time.

Scrub from the guide

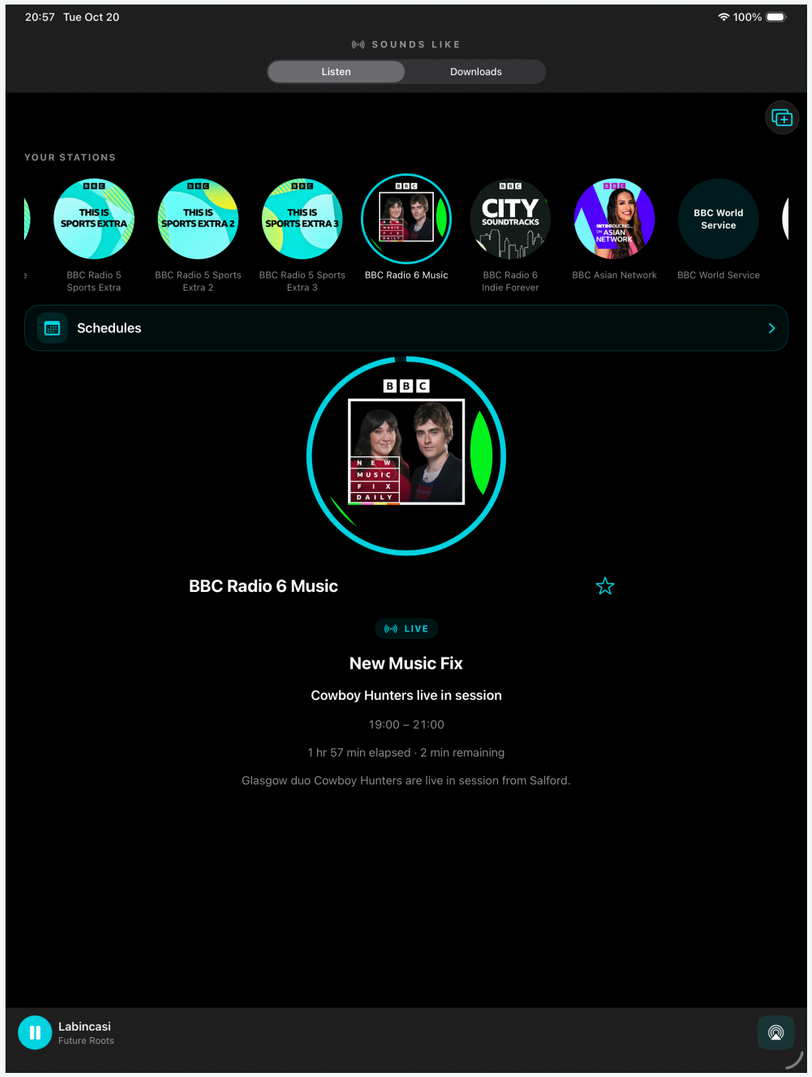

For the current playing programme, both the preview progress bar and lower playback bar support dragging.

Work in more than one window

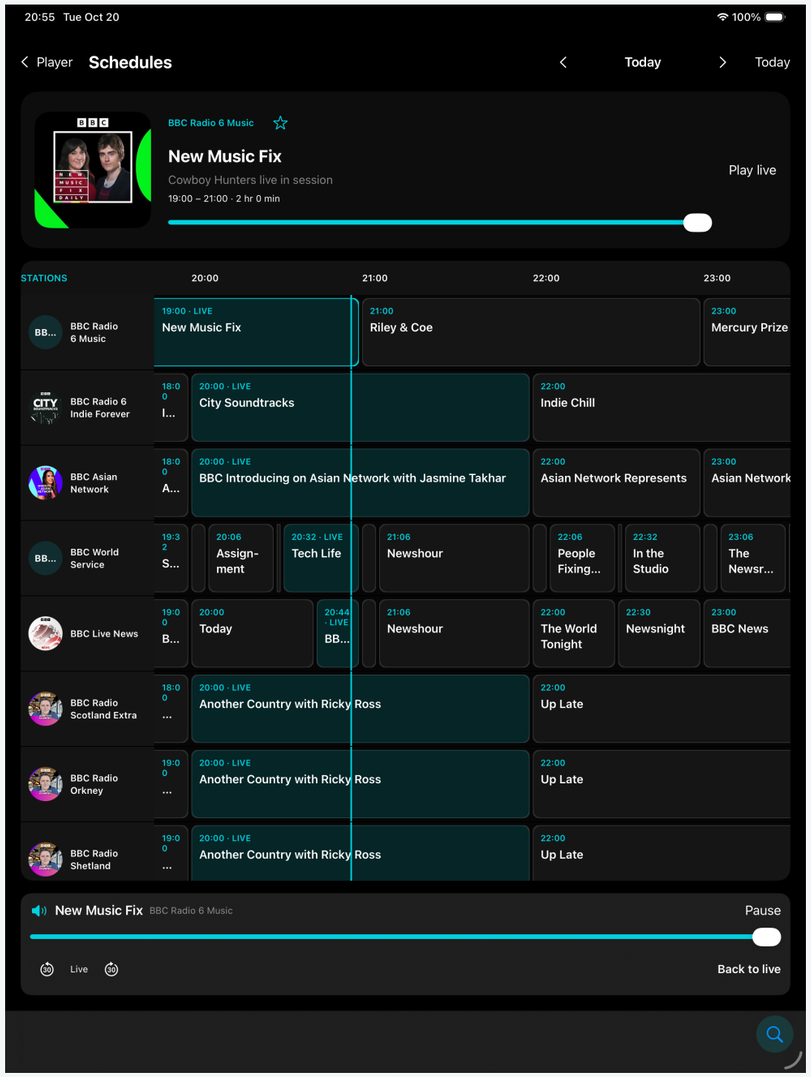

Open another app window for browsing. Windows share the same player and library, so playback remains consistent.

Search across the day

Typing in guide search shows matching programmes across the selected day’s station schedules.

NOW PLAYING

SCHEDULES

Made for the remote

A centred player, smooth scrubbing and a full-screen programme guide.

Focus on listening

Favourite stations appear as circles and hide after inactivity. The player recentres when the favourites disappear.

Scrub with the touchpad

Select the progress bar to enter seeking, slide to preview a position, then select to confirm. Back cancels the seek.

Choose a show

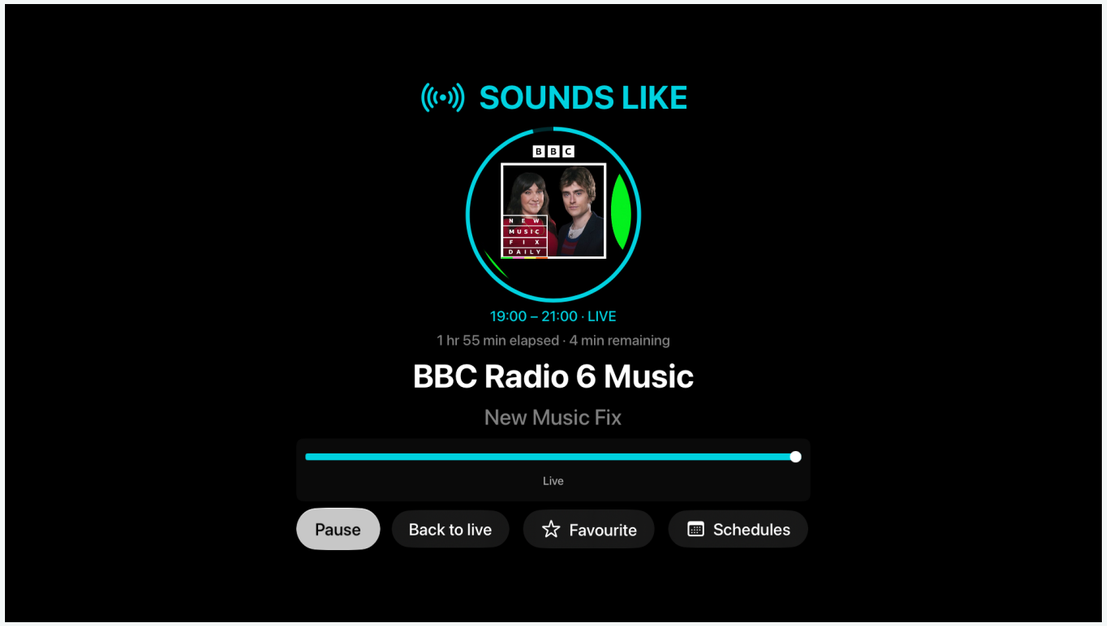

Selecting an available programme starts it. Selecting the same active programme again returns to Now Playing.

Top Shelf

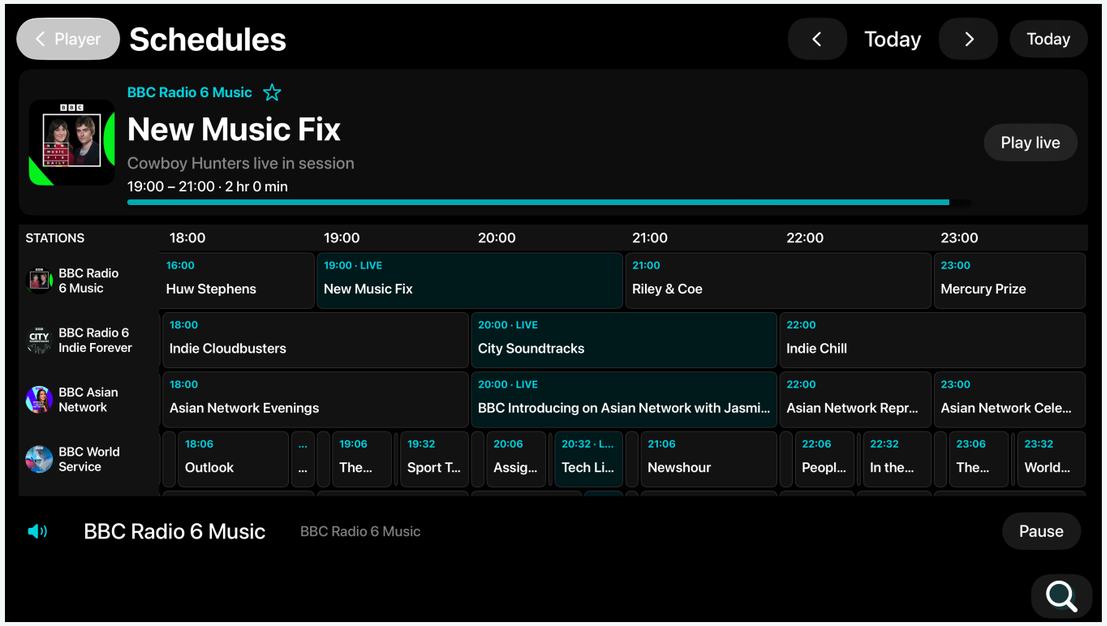

When the app is in the Home Screen’s top row, the new extension provides Favourites followed by Recently Played. Selecting a tile opens the station or recent show.

Deployment status

The latest TV build, including Top Shelf, compiled and signed successfully. Physical installation and Top Shelf verification remain blocked by the Apple TV developer connection.

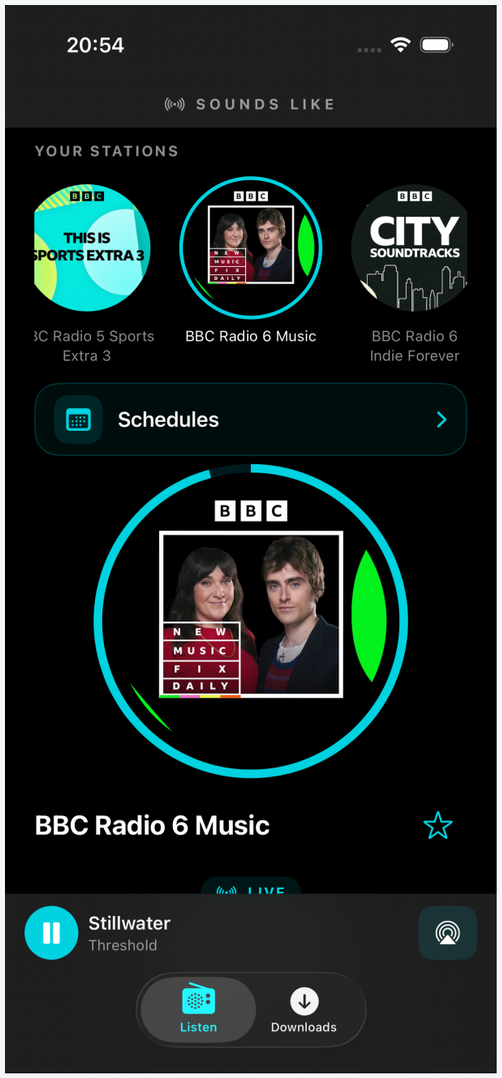

NOW PLAYING

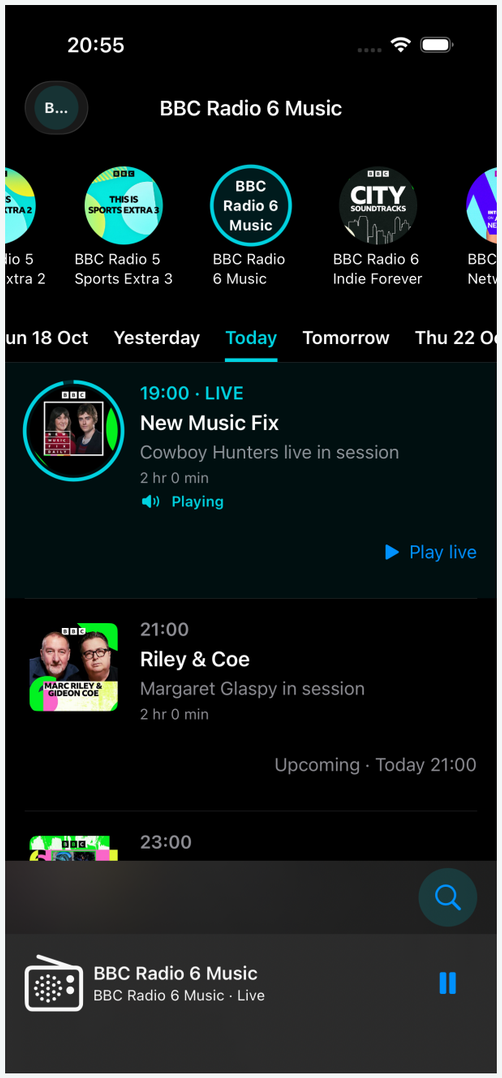

SCHEDULES

Duo: compact outside, expanded inside

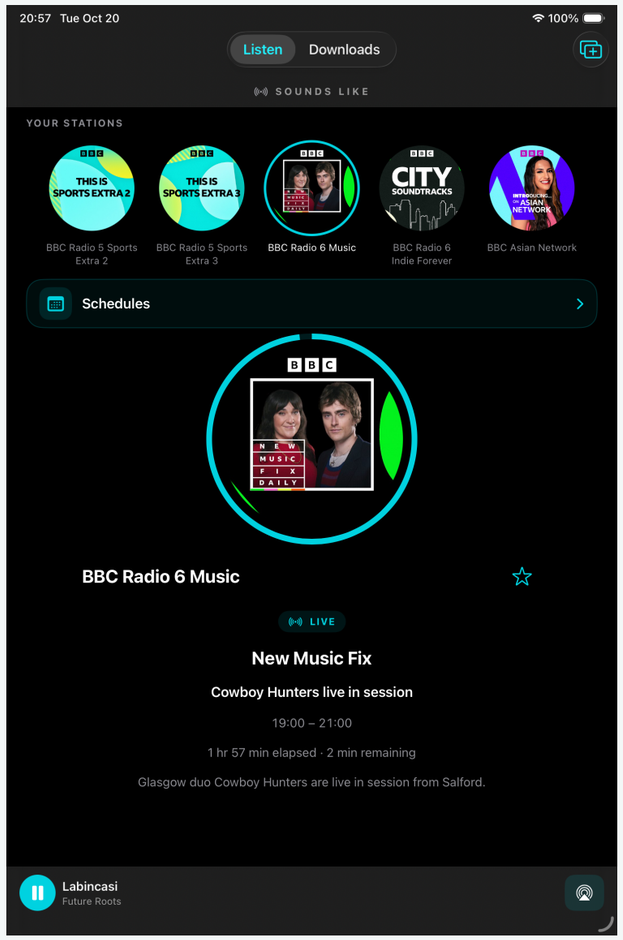

Layout references for the requested outer and unfolded inner screens. Exact Duo hardware dimensions are not verified.

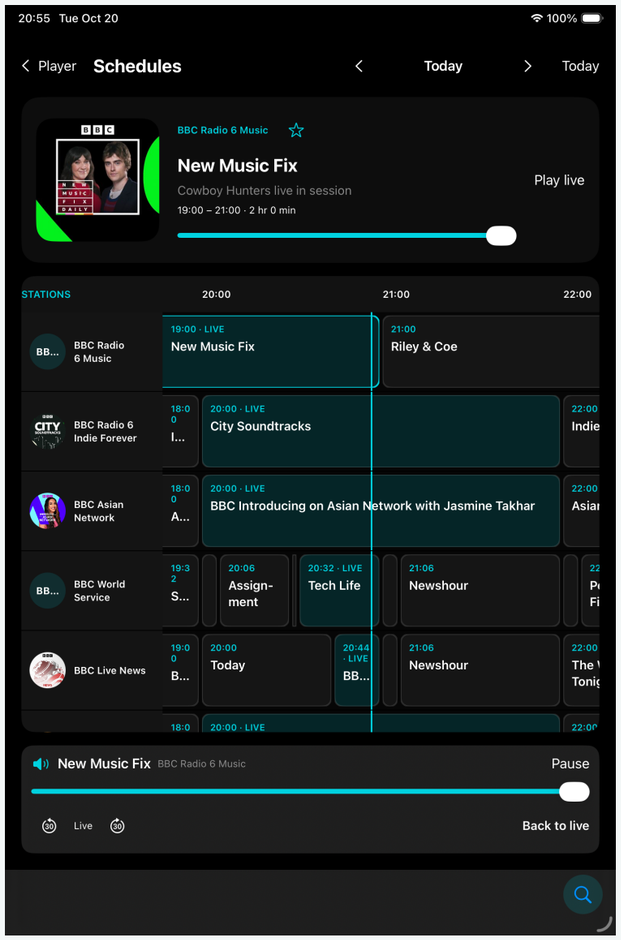

OUTER / NOW PLAYING

OUTER / SCHEDULES

INNER / NOW PLAYING

INNER / SCHEDULES

Outer screen: the iPhone compact layout reference. Inner screen: an expanded layout rendered at 744 × 1133 points using an iPad mini simulator, with the phone-style app navigation. These demonstrate adaptive layouts, not confirmed Duo hardware support. Multi-window support is implemented at app level; behaviour on Duo is unverified.

What is available, and where

A practical guide to everyday listening and the current verification status.

FEATURE	IPHONE	IPAD	APPLE TV	DUO PREVIEW
Live stations, show artwork and track metadata	Yes	Yes	Yes	Adaptive
Favourites with iCloud sync	Yes	Yes	Yes	Adaptive
Catch-up playback and saved position sync	Yes	Yes	Yes	Adaptive
Schedules and type-to-filter search	Station list	Time grid	Time grid	List / grid
Scrubbing within available playback range	Touch	Touch	Remote	Adaptive
Offline downloads and synced download list	Yes	Yes	No	Unverified
Multiple app windows	No	Yes	No	Unverified
Top Shelf favourites and recently played	-	-	Built*	-

* Top Shelf is built and signed, but its physical Apple TV deployment and Home Screen behaviour have not yet been verified.

Download once, keep copies on both

On iPhone and iPad, hold an available past show and choose Download show. The shared list syncs through iCloud; each device retrieves its own offline audio. Open the app on each device to allow syncing. Deleting a download removes it from both after sync, while keeping listening history.

Availability and live data

Catch-up playback and downloads depend on the programme remaining available. Scrubbing is limited to the stream’s available buffer or the episode’s duration. Show images, track details and schedule listings depend on the BBC data supplied at the time.

Other platform notes

CarPlay integration has been prepared, but the required entitlement and in-car verification remain outstanding; no CarPlay capture is included. The screenshots in this guide are simulator captures, not proof of deployment to physical devices.
